

Technical Surveillance Counter Measures (TSCM)

Only you know if you have reason to believe whether someone is listening or watching, and if you think they are, then they probably are. Technical Surveillance Countermeasures or TSCM, is also known by the reference of "Bug Sweeps," and the more modern name of Electronic Eavesdropping Detection or EED. We are Certified Specialists in the detection and location of eavesdropping devices.

Technology is constantly evolving. The technical aspects of Eavesdropping, (audio, video, cell phones, computer spy ware and GPS), has grown and these devices and methodologies are becoming easier, cheaper and better.

We specialize in locating and neutralizing surreptitious devices and nefarious personnel. It's a simple matter for an antagonistic employee or enemy, to buy an effective transmitter or 'bugging' device. Cheap, yet effective, audio and video devices are easily planted in boardrooms, computers, executive offices, vehicles and homes. Our product is privacy assurance and protection. The GBI Team is trained to the same specifications and utilizes the same equipment and techniques used by federal government. We use the state of the art OSCOR, an R.F. Spectrum Analyzer, as well as F.L.I.R., telephone and networks analyzers (\$100,000).

In Minnesota as in most states, you need to be a licensed Private Investigator to conduct these counter eavesdropping sweeps. We are licensed to do so, which allows us to do compete consulting work while protecting your interests. The GBI Team uses the latest REI counter-eavesdropping equipment and can ensure complete confidentiality.

An Eavesdropping Threat Detection Sweep can be done in approximately 6-8 hours if the site is large, more time will be required. The hard line telephones are checked, a physical search is done and a radio frequency analysis is done for hidden wireless microphones and video cameras.

Our standard TSCM sweep services include the following:

- Inspect all outlets, switches, and lighting for VLF/RF devices.
- Inspect all PBX, LAN, and WAN connections and equipment.
- Inspect all tables, chairs, desks, cabinets and furniture.
- Analysis of all EMF emanations. (0-8GHZ)
- Analysis of Infra-red and Laser emanations.
- Active and passive light spectra examined.
- Evaluation of computer network and associated cabling.
- Inspection of all Xerox, fax, and other imaging equipment.
- Phone lines inspected and toned back to the telecom room.
- Thermal imaging and analysis of inspected areas.
- Most activities will overlap to provide complete coverage.
- *Computers scanned for infections of spy ware. (on request)

Secure Conference Room Service

This service is tailored made for the technology, financial and legal industries and its many conference and meeting locations. Whether it's the legal board rooms or the stop over suites, we will come to your location, conference room, hotel suite or meeting area, scan and secure it electronically, set up an acoustic noise generators and monitor the signals environment during the duration of the meeting, ensuring your information remains secure.

Trained by the leading TSCM Company in the world - Research Electronics International, we are trained to the same specifications and employ the same techniques used by government. We can come to your place of business, perform a vulnerability analysis and provide you with an immediate estimate. Our fees are competitive and reasonable. Call our offices for a comprehensive quote.

Motor Vehicle TSCM Sweep

A standard "Motor Vehicle" will require 2-4 hours. A TSCM/Tracking inspection performed on a standard, non-luxury motor vehicle will require two to four per vehicle (depending on the vehicle). Examinations of luxury vehicles, larger SUVs, motor coaches, boats, and similar motor vehicles will usually involve several days at a higher cost.

Residential TSCM Sweeps

Residential TSCM inspections are similar to commercial and industrial sweeps and while they share many of the same characteristics, homes are often far more cluttered especially if the home has been lived in for a long time. The GBI Team will conduct a thorough inspection of the immediate exterior and the interior of the residence, cellphones, computers and vehicles. Additionally, the team will run a check on your home network and wireless router security. Our residential TSCM services are designed to restore your peace of mind and ensure your privacy.

Recurring TSCM Sweeps

Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday

Recurring sweeps are a convenient program of ongoing TSCM inspections at a reduced daily rate. One annual fee and after an initial inspection to develop a standard, we randomly inspect your offices and workspaces several times a year. Typically these inspections will be done on a quarterly basis.
